Guest: Cathy J. Collins

Date-Time: Tuesday, December 16, 2003 at 18:41:57 (CST)

My Expected Results for IE,EA,NA,SSAF Population Groups: 90,0,10,0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 73,0,27,0

Date DNAPrint Test Was Ordered: 29 July 2003

Comments: We were surprised at the Native American results, because of the theories out there about the Collins family possibly being African.

My Expected Results for IE,EA,NA,SSAF Population Groups: 75,0,25,0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 75,25,0,0

Date DNAPrint Test Was Ordered: March 2003

Comments: See my initial log entry and comments on June 9, 2003. I now have new information about my paternal line. Documented ancestry of European 75% and Nansemond 25% (indigenous American). The East Asian (Chinese/Japanese/Korean/Pacific Islander) is an incorrect analysis of my ethnic ancestry.

Date-Time: Tuesday, December 09, 2003 at 00:15:19 (CST)

My Expected Results for IE,EA,NA,SSAF Population Groups: 0, 100, 0, 0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 12, 85, 3, 0

Date DNAPrint Test Was Ordered: 6 November 2003

Comments: I suspect the Indo-European element may have come from the Dutch. There were some Dutch colonist in the 1600's in Taiwan. But, then the Indo-European could have come from Arabs or Persians who settled in Southern China some 700-1000 years ago, where some of my ancestors came from prior to settling Taiwan. I'm going to try to find out where the Indo-European ancestry came from.

Date-Time: Sunday, November 30, 2003 at 13:14:41 (CST)

My Expected Results for IE,EA,NA,SSAF Population Groups: 30,0,0,70

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 52,5,0,43

Date DNAPrint Test Was Ordered: 20 Oct 2003

Comments: Surprised at high IE percentage given known European ancestors are my paternal grandmother's father (Irish/German), mother's grandfather(French). Many of my grandparents are of mixed blood from pictures, but of unknown sources and listed as mulattoes in the census. Both parents are from Louisiana. One possible very great grandfather (paternal grandfather line) born approx. 1765 is said to be from the Congo. Never heard any hearsay on NA blood, though I felt this would have been a real surprise, but test pretty much confirmed that we have no NA background, or undetectable, as I am not sure about the 5% EA, which could be from European ancestors. My family has always gone by the one drop rule, claiming African American ancestry, so these results, though interesting and validating, cannot alter the power of culture or social construct of race, for me personally.

Guest: George Valko

Guest's Website: www.georgevalko.com

Date-Time: Monday, November 17, 2003 at 02:51:05 (CST)

My Expected Results for IE,EA,NA,SSAF Population Groups: 100, 0, 0, 0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 100, 0, 0, 0

Date DNAPrint Test Was Ordered: October, 2003

Comments: Y-DNA haplogroup results = R1a, I really had no expectations for Y-DNA results. However, many surnames ending in KO (I'm Valko) are from the Ukraine and that perfectly fits the region of R1a. My Y-DNA ancestors are known in western Slovakia c. 1700 when the paper trail ends. Four Valko families still live there today. I am interested in starting a VALKO Y-DNA surname study to see which Valko families are related and find the origin of the Valko surname. Most Valko's seem to originate from eastern Slovakia. Some are Ruthenian/Carpo-Rusyn. Some spell their name Walko. Possible variations are Volko, Volkov, Walkowiak — mtDNA haplogroup results = T2

Date-Time: Sunday, November 09, 2003 at 07:54:33 (CST)

My Expected Results for IE,EA,NA,SSAF Population Groups: 100, 0, 0, 0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 93, 7, 0, 0

Date DNAPrint Test Was Ordered: 20 August 03

Comments: I expected IE- 100% and was only surprised by the EA of 7%. I knew there was NA ancestry on my mothers side and assumed that it was far enough back that my test would not show it. The EA has to be NA. The big surprise and incredible shocker came with the results of my Y -DNA STR test and the follow up SNP test for confirmation. The results of this test was Haplogroup E3a =African Bantu. The SNP was P1+. This is absolutely a shocking and incredible result. The oldest known male in my father's line is Christian Gabinish of Lothringen born there in 1820 (death certificate). Lothringen was a part of Alsace-Lorraine but I don't know its exact location in 1800. How and when did an African-Bantu get there? This paternal event had to take place no sooner than 1300. I show no SSAF in the print test.

Date-Time: Saturday, November 08, 2003 at 09:45:46 (CST)

My Expected Results for IE,EA,NA,SSAF Population Groups: 95, 0, 5, 0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 91, 0, 9, 0

Date DNAPrint Test Was Ordered: March 16,2003

Comments: From the family stories I estimated the amount of Native American to be lower. This was on my mothers side. I now suspect that I also had a percentage on my fathers side. It was told that my 3rd great Grandmother was 1/2 Spanish. I now believe this may have been a coverup for the fact that she was actually 1/2 Native American. Familys of that time tended to try to cover it up by saying they were Black Dutch or some other Nationality that was darker haired and complected.

Date-Time: Friday, November 07, 2003 at 17:16:14 (CST)

My Expected Results for IE,EA,NA,SSAF Population Groups: 5, 0, 10, 85

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 30, 0, 0, 70

Date DNAPrint Test Was Ordered: Oct 2003

Comments: I'm an African-American Male. I expected the european element to be really low because in my family, we have evidence that there was mixture but it was pretty far back. My grandmother on my fathers side looks "biracial" and claims that her grandfather was Italian. Through my mothers side I found an 1880 record of my great/great/great grandmother that listed her as mulatto but those two things are about the only thing I had to go on. I did my Dna profile with ancestrybyDNA and that came out 70% African and 30% European. I was somewhat shocked at that percentage since my mothers side claims they have "indian blood". They have not placed me in a haplogroup for my MtDNA results yet because they claim its a rare mtdna

sequence but after looking on the internet for awhile and comparing my mutations, I found 2 groups that come pretty close and those groups are L3b and L3d. Both of these are connected to east Africa. My Y DNA results came back as R1a. I found this grouping quite strange because this group is linked to eastern Europe and southern Russia and since no one knows that much about my fathers father, its quite exciting to speculate where this link may have come into play. I did my Y and mtdna tests through family tree dna. If you have anything that can help me or if you would just like to discuss results, feel free to e-mail me.

Date-Time: Thursday, October 23, 2003 at 00:15:55 (CDT)

My Expected Results for IE,EA,NA,SSAF Population Groups: 81, 0, 19, 0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 91, 2, 7, 0

Date DNAPrint Test Was Ordered: Sept 2003

Comments: My Y-DNA haplogroup is I, Mt mtDNA haplogroup is A. My NA is from the Pacific North West. My research has lead me to believe that I'm 19% NA and the rest European. I was surprised that NA was so low. Not surprised that there was EA even through I didn't expect it. NA comes from EA. Another factor maybe that there was more European interaction among my NA earlier than I think. Hudson Bay Company and Explorers were first European groups in the Pacific North West. This may have played a role. More research needs to be done.

My Expected Results for IE,EA,NA,SSAF Population Groups: 92, 0, 6, 2

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 87, 13, 0, 0

Date DNAPrint Test Was Ordered: 18 Aug. 2003

Comments: I was surprised at the lack of *any* NA results, considering I have the anthropologically documented "shovel teeth" of southeastern Native Americans (as well as other traits suggestive of NA ancestry, such as epicanthal eye folds, high cheekbones, olive skin, brown/black hair with developing white streaks, etc.), plus ancestors who were in the Appalachian South in the mid-1700s. I was equally surprised at the high number for EA ancestry, but not surprised at the lack of an SSAF reading--I have the mandibular tori characteristic of Africans/African-Americans, but that is the only SSAF trait I have found. I'm chalking up my results to: 1) The apparent possible confusion that can exist between EA and NA results, and 2) the margin of error that is noted for people taking the DNAPrint test. I'm definitely going to consider taking a refined version down the road--maybe 3.0.

My Expected Results for IE,EA,NA,SSAF Population Groups: 94, 0, 6, 0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 65, 0, 35, 0

Date DNAPrint Test Was Ordered: AUG 2003

Comments: I believe that my great-grandmother on my paternal side was half Cherokee, so I expected 6% Native American. I've got a well established tree on my mother's side. My mother's line and my paternal grandmother's line almost certainly have no NA heritage. The actual percentage reported of 35% Native American seems highly unlikely.

My Expected Results for IE,EA,NA,SSAF Population Groups: 100,0,0,0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 90,0,10,0

Date DNAPrint Test Was Ordered: August 2003

Comments: Y-DNA Haplogroup R1b, HVR1 Haplogroup T2. Since my mother was adopted and her mother was adopted, I have been unable to document ancestry in those lines. The research on my paternal lines revealed nothing but Indo-European background, so I was surprised to find 10% NA. I have ordered DNAPrint for my mother and expect her results to be 25% NA. My grandmother (whom I never knew or saw) would have been 50% NA. Her adoptive parents apparently concealed the NA heritage (in the 1880's) if they knew of it.

My Expected Results for IE,EA,NA,SSAF Population Groups: 95, 0, 3, 2

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 87,0,13,0

Date DNAPrint Test Was Ordered: 12 June 2003

Comments: DNA Print test was done for maternal line aunt. There is no genealogical record for ancestors other than Europeans; however, we are not at all surprised at the results given that most lineages for this family trace back to colonial Virginia and New England. Some scholars suggest that prior to 1715, unions with Native Americans were encouraged. The biological concept of race was not well-formed during this period and English/European identity was based on culture. We suspect that the approximate 13% is cumulative from as many as ten different lines that trace to 17th century Americans but are not so far traceable to European family founders.

My Expected Results for IE,EA,NA,SSAF Population Groups: 100,0,0,0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 82,12, 6,0

Date DNAPrint Test Was Ordered: April 2003

Comments: This was my 2nd run at Ancestry by DNA through FTDNA. My 1st run was 85,8,7,0 with 7 FL's. There were no great surprises but can't account for the EA component. The entry of the EA component is probably through Irene Hazzard b. 1808 in NY who m. John McLucas/Lucas who came to America in 1825 from Ireland. Family tradition was that they were both Irish. Cannot account for my NA component yet but the picture puzzle ain't finished yet !! Most of my ancestry can be documented back to the early to mid 1600's with some lines back to the 1400's. The exception would be the Hazzard & McLucas/Lucas line. My Y-Chromosome test was R1b assigned and my mtDNA results were Haplogroup T1.

Date DNAPrint Test Was Ordered: Spring 2003

Comments: Hello. I am interested in compiling data correlating ABD results to particular ethnic backgrounds. Anonymity will be respected. If anyone wants to provide data, just email me your exact ethnic background (to the extent you know) and your ABD 2.0 results. Also, note that the Rosenberg paper mention in the FAQs section of the ABD site shows extensive EA admixture in some NA tribes, and a bit of NA admixture (presumably ancient Northcentral Asian) in some European groups, including Russians, which probably all explains some results discussed here.

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 92, 0, 8, 0

Date DNAPrint Test Was Ordered: 26 June 2003

Comments: As a native of northeast Scotland with no expected non-European connections, I was surprised to have the 8% "Native American" result (which means a min. 5% max 11%).

However, being adopted, I only have information about my maternal grandmother's side of the family tree, so perhaps someone in the wider ancestral tree was American or Canadian (there were certainly close links between Scotland and Canada). Otherwise, I look typically "Scottish" - very pale skin and blue eyes, which is at least consistent with my Y-Line results that indicate Scandinavian origins, which is more than likely for the northeast of Scotland. FTDNA's SNP test put me in Haplogroup I, which suggests "viking" origins, and Oxford Ancestors also indicated I had the "viking marker". My blood group 'A' also suggests Scandinavian or Germanic "invaders". My mtDNA result from Oxford Ancestors put me in the 'K' clan, which is consistent with migration to Scotland, and my known direct maternal line going back to circa 1780 is also all in the northeast of Scotland.

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 95, 0, 5, 0

Date DNAPrint Test Was Ordered: June 2003

Comments: In my direct male line, my 5th-, 6th-, and 7th-great-grandfathers are documented as registered Indian traders in the Mississippi Territory (in the area of what is now Baldwin County, Alabama) and reportedly intermarried within the Creek tribe they traded with during the 1700s. However, I knew this was probably too far back to detect any NA ancestry. On the other hand, one of my great-grandmothers was rumored to be half-Indian, and that fact was suppressed within the family. If she really was half-Indian, my grandfather was one-quarter, my father was one-eighth, making me one-sixteenth (6.25%). Looks like the rumors were true--much to my satisfaction! My FTDNA confirmed Y haplogroup is E3b (M35+). My maternal haplogroup is K. Email address (Delete [AT] and add @ sign to use): rlsteadham@mac.com

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 100, 0, 0, 0

Date DNAPrint Test Was Ordered: June 2003

Comments: I was told NA and IE from birth Family. Was told some Jewish roots maybe. I am very shocked NO NA at all. DNA is awesome, hope I can find out more about the IE.

Email address (Delete [AT] and add @ sign to use): Chines5159@aol.com

Guest: Alexander Y. Klimenkov

Date-Time: Tuesday, August 12, 2003 at 12:39:59 (CDT)

My Expected Results for IE,EA,NA,SSAF Population Groups: 100, 0, 0, 0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 95, 0, 5, 0

Date DNAPrint Test Was Ordered: 24 June 2003

Comments: Mr. Klimenkov is from European Russia (Smolensk). His father and grandfather were also born in Russia as was his mother. His haplogroup is J1b1, Y-DNA pending. If anything other than European, he was expecting some East Asian as when you "Scratch a Russian, (you) find a Tartar," but instead, we find Native American. We have seen reports of expectations of Native American, but receiving East Asian instead. Possibly, the "Native American" is from one of the descendants of the Siberian peoples (ALeuts, Eskimos, etc.) who crossed the land bridge to the Western Hemisphere some 8,000-10,000 years ago. Perhaps other people with Russian ancestry have received a similar result.

Guest: C. Wilson

Date-Time: Tuesday, August 12, 2003 at 10:05:17 (CDT)

My Expected Results for IE,EA,NA,SSAF Population Groups: 35,0,5,60

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 21,14,0,65

Date DNAPrint Test Was Ordered: July 2003

Comments: C. Wilson is the mother of Kevin Wilson (see previous log entry dated May 13th). The percentage of Sub-Saharan African is close to what was expected. We expected a higher percentage of Indo-European and a portion of Native American. The East-Asian component was not expected. Overall, when compared to the results of her son Kevin Wilson (IE 22%, EA 10%, NA 0%, SSAF 68%), there does appear to be a correlation between the data. Her family roots lie mainly in Louisiana and Arkansas. The heaviest admixture lies in the Louisiana branches of the family. Large questions remain as to the ethnic-heritage of some of the persons 2 to 3 generations back. European and Native American ancestry has been assumed, as well as speculation about Roma or East-Indian origins (due to phenotype characteristics). She also has a family branch with "origins" in South Carolina.

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 100, 0, 0, 0

Date DNAPrint Test Was Ordered: 5/28/2003

Comments: These results are for a 2nd great-grandson of Robert Rose (1769-1847) and wife Elizabeth of Washington, D.C., with line of descent down through Dr. Benjamin F. Rose and wife Elizabeth Higgs and their son Robert Sauls Rose and wife Sarah Ellen Aesque of Virginia and Texas. The Rose and Higgs families were expected to be 100% Indo-European, however, the Aesque family supposedly were partially Native American. This has not shown up in the results.

Comments: Beth is a distant cousin to David K. Faux. She is the same generation as my mother and uncle. Beth descends from the second son of the woman shown in my website, whereas my uncle etc. from the eldest son of the same woman. I suspect that the NA and EA should simply be combined giving a value of 9% Native American. This is a bit high, but considering the confidence intervals, not unexpected. Here the Native American genealogy is "solid" back into the 1600s when the paper trail runs cold.

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 0, 12, 0, 88

Date DNAPrint Test Was Ordered: 13 July 2003

Comments: I was actually surprised to find "East Asian" dna, but I believe it is related to my Native American ancestry - which I have confirmed. As a solution, I think dnaprint should combine the Mongoloid sub-races (NA and EA) into one group just as it combines the sub-races of "Indo-Europeans" and "sub-saharan Africans". I was also surprised by the significant amount of African dna and lack of any Indo-European, but I suppose its because my European ancestry is so far back. It too has been confirmed, btw. Overall, the test is a pretty accurate reflection of my most recent ancestry. So, if that is what its meant to measure, its done a good job. I would recommend it to those filling in gaps in their family tree for the past few generations or so... if you dont know your great grandparents, for example. But, for those more interested in 8th generation on back, such as myself, its not going to tell you much that you dont already know.

Date DNAPrint Test Was Ordered: 12 May 2003

Comments: We are island born Puerto Ricans and so are all of our direct ancestors for the last 250 years. About that time, the first documented Spaniards appear in our tree. In other words nothing but creole or native Puerto Ricans for generations. Puerto Ricans as an ethnicity are comprised of three main groups, the Spanish colonial, the Taíno Indian and the African. Since my brother and I have over 23 years of personal documented genealogy and history of European, African, and probable Taíno (Native) heritage, the results are absolutely not as expected and seem implausible. In other words, something does not compute here. Since I just received the results today, we are still digesting it all.

Comments: Am not surprised by the EA admixture, given the findings in German groups. Mother's line was recent immigration Germans. Fathers was half Amish (Penn German) and half Dutch, directly immigrated from Holland. The NA is very startling, although the Amish line has been in the US in Penn, Ohio and Indiana since pre 1700. Still very surprising though since these families intermarried strongly. Well within the margin of error though, so may really be EA, or nothing. This is the mother of Roberta Estes, also with results posted.

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 82,0,18,0

Date DNAPrint Test Was Ordered: 27 May 2003

Comments: Bonnie G is my sister, daughter of Faith S. Although I placed the expected NA results at 12%, I really had no idea what to expect. Our father's ancestry has not been clearly established. The results would indicate that she either inherited a significant amount of our mother's NNA alleles, or our father also has NNA. Although our paternal grandmother was born in Indian Territory we have not yet attempted to establish any NNA ancestry through that line. We plan to order the mtDNA, Y-DNA and DNAPrint test for our father. An interesting aside...I chose this particular sister for testing because she does not share my mother's physical characteristics. My sister is darker skinned, has brown eyes, etc.

Date DNAPrint Test Was Ordered: May 15 2003

Comments: I am close to what I expected, I know of my indo-european ,african and native american ancestry not just through relatives deceased and living but through genealogical records, historical documentation of the European side of my grandmother and African both sides which is

documented in African American Historical Societies of the towns they resided and on the Native American side the Indian is documented by BIA and tribal roll records on the NA side. I had thought the NA would be at least 25% or higher given my family have Native American phenotypes and are so identified as Indians by the Indian and non-Indian population. Comments: Oxford says that I am a descendent of Helena. Based on 25 years genealogy research, everything that I know of my ancestors would be IE. English, Scots, Swedish, Dutch, French, probably Scots/Irish. There has never to my knowledge been any hint of NA ancestry in my family on either side. I do have a picture of a gg grandmother that I have wondered about for years. She had a hint of NA look to her face. She was of apparent English/French ancestry according to my research. I have tons of Colonial ancestry on both sides.

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 90, 0, 10, 0

Date DNAPrint Test Was Ordered: February 2003

Comments: Fern is the mother - in - law of David K. Faux. She is 103 years old and born in the Ozarks. All of her ancestors resided in the Southern Appalachians or Alabama in the 1700s. Surnames such as McDaniel, Collins, and Wright strongly suggested a Cherokee connection. The estimate of 12% was strictly a "guesstimate" since as yet no clear genealogical connection has been established. Some of the forenames of her ancestors such as Sabra and Jemima I thought might hint at an African connection in Appalachia - again no evidence (there is a lot of genealogical work yet to be done).

My Expected Results for IE,EA,NA,SSAF Population Groups: 88, 0, 6, 6

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 100, 0, 0, 0

Date DNAPrint Test Was Ordered: January 2003

Comments: Vi Faux is the mother of David K. Faux, and sister of Dale Williamson below. Her paternal Y-DNA (as shown in her brother's sample) is R1a. The Native American expected results are an estimate based on Mom's known genealogy. It was therefore a surprise that she showed 100% European (especially considering her son's results and those of her brother). In addition, her father and siblings all have physical features suggesting some African ancestry: and when his grandson (me) became quite dark in the summer he would comment that it was due to the "Indian" in the Dawsons, and the African in the Williamsons. It would seem that the phenotype is just a coincidence.

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 100, 0, 0, 0

Comments: I had a strong family tradion that a ggrandmother was part NA [early 1800s in E.Ky]. What I now think is that 4 families [Whitaker, Risner, Fletcher and Marshall] migrated for 2-300 years from MD, NC and into E.Ky. and intermarried over this period. I have no doubt all were IE. I have enough doubts of the test results that I am having my sister tested.

My Expected Results for IE,EA,NA,SSAF Population Groups: 50, 0, 50, 0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 98, 2, 0, 0

Comments: My mtDNA test was Haplogroup C, Native American. And yes, my maternal grandmother was. Also my maternal grandfather, but with no yDNA test on him I would believe *some* mixture. Since we have no male descendants of his, that will remain a guess, and I doubt it, but ... I expected 50% NA. The red dot on my triangle is almost in the corner angle, and I'll have to go read all the documentation to see what all the yellow, blue, and black dots mean, but at this point, I would say that the factors they are using for the test can't identify western north American DNA.

My Expected Results for IE,EA,NA,SSAF Population Groups: 94, 0, 3, 3

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 94, 0, 6, 0

Comments: As a kid, I was "officially" told that I was 3/4 Irish and 1/4 German. But "unofficially" I was told that my supposedly "all Irish" maternal grandfather was "Black Irish"

and that he might be "part Indian." And since he had very curly hair, I wondered if the "Indian" might be "African" or a mixture of Native American and African. My first DNAPrint results showed significant Native American, but no African. I ordered a second test (results not yet back) because there were about six markers for which they could not get an accurate reading. (These were reported to me as "FL" for "failure.") The total number of markers they checked was 68. So, these failures account for 9% of the date. If my nucleotides for them were known, my results might be a little different. Also, for DNAPrint marker #1116, which is rs3340, I got a TT. Yet, the literature says that the only two known possibilities are A or G. So, this is either a mistake or I really do have two T's. This could be possible because my "Indian" grandfather's Irish side came from the very same small spot in Ireland that my father came from. (This small spot is west Galway County - and more specifically, the part near the mouth of Clifden Bay and the islands nearby.) If T is common among the people native to there, then we might have found a new marker. So, for both these reasons (six failures and that odd TT reading), I asked they redo the test. I'm eagerly awaiting the new results. I've not yet had relatives tested, but am working on that. I think the bearer of my Native American ancestry is the great-great-grandmother who came from the northern tip of Virginia (near Winchester). According to the Census, all four of my "Indian" grandfather's grandparents came from Ireland. But I doubt this is true - back then, Indians living in the east had to hide their heritage and many pretended to be Irish, more specifically "Black Irish" or else African or "Black Dutch" I think the g-g-grandmother from the Winchester area was the one who was not really from Ireland.

Date-Time: Tuesday, May 13, 2003 at 10:09:54 (CDT)

My Expected Results for IE,EA,NA,SSAF Population Groups: 18,0,10,72

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 22,10,0,68

Comments: The percentage breakdown of my results was pretty much what I'd expected, but I received East-Asian results where I instead expected to receive Native American. My family contains no known ancestors of East-Asian decent, so I'm assuming that the East-Asian component is actually Native American. My immediate family members are also being tested, so perhaps those results will be more in line with what I expected to receive.

My Expected Results for IE,EA,NA,SSAF Population Groups: 99, 0, 1, 0

My Actual DNAPrint Results for IE,EA,NA,SSAF Population Groups: 84, 3, 13, 0

Comments: My great-grandmother claimed to be "Cherokee." She didn't specify "full-blood," 1/2, 1/4 or any such fraction. Genealogical research showed her apparent biological four grandparents as "White" Census Records). Therefore, I figured she couldn't have been more than 1/8 or 1/16 Cherokee, if at all. The 13% NA finding was welcome, but surprising. I hope it's somewhere near accurate. She had one grandmother who died after 1870, in KY, who can't be found in the 1850, 1860 or 1870 federal censuses. This bears looking into!

My Expected Results for IE,EA,NA,SSAF Population Groups: 100, 0, 0, 0

My Actual DNAPrint Results for IE,EA,NA,SSAF2Population Groups: 79, 21, 0, 0

Date DNAPrint Test Was Ordered: 1st-Feb 2003 2nd-Mar 2003

Comments: BGA results 79% European, 21% Asian. I took this new DNAPrint Ver. 2.0

BioGeographical Ancestry ([BGA](#)) DNA test out of intellectual curiosity as I had been previously Y-DNA and mtDNA tested by FTDNA and had been using DNA in research as a tool and wanted to be more familiar with this new test. My results were surprising to me. I have over 27 years of extensive genealogical research and documentation. I also had prior Y-DNA and mtDNA tests. All indicated 100% European ancestry. There is no Asian potential source or even a rumor of a possible source in my 8 generation Pedigree Chart. My genealogy is PA German for the last 250+ years. I had the lab test repeated with new specimens. The results were the same. I have started a new [PA German Ethnic Group DNA Project](#) to look into this further.

Email address (Delete [AT] and add @ sign to use): [Contact](#)

Legend: IE=Indo-European, EA=East Asian, NA=Native American, SSAF=Sub-Saharan African population groups.
