

A Modest C-19 Proposal

"WHAT DO YOU HAVE TO LOSE?"

(Jan. 19, 2022) — Full disclosure: your humble servant is not opposed to true “vaccines,” but instead is vehemently opposed to authoritarian, unconstitutional, “work-around” dictates mandating universal “get jabbed” with the mRNA-based fluids now being peddled as “safe” and “efficacious”... or else. In your humble servant’s view, the fluids have not been confirmed as either “safe” or “efficacious,” despite having been conceived and brought to market by President Trump’s [Operation Warp Speed](#).

Why? Because those efforts involved one Anthony Fauci.

If you believe that Herr Fauci had the interests of either President Trump or the American people front and center regarding the nation’s response to the Wuhan PRC (“People’s Republic [*sic*] of China”) viral pandemic (yes, Virginia..., that is where the pandemic was launched...), you should expand your virus knowledge horizons. Specifically, you

should read the well-documented and extremely disturbing Robert F. Kennedy, Jr. [book](#), “The Real Anthony Fauci: Bill Gates, Big Pharma, and the Global War on Democracy and Public Health.” FYI, it can be purchased from Nook Readers online for \$2.99.

If you’ve not heard of that book before, do not fret that somehow you missed it: the sorry excuse for an independent mainstream media now dominating and controlling the dissemination of information in this once-free nation has intentionally brushed the book aside. In a seemingly conscious if not coordinated effort to simultaneously both shield Fauci and ratify the Goofball’s lunatic goal of requiring all Americans (but not illegal aliens...) to “get jabbed,” or suffer increasingly oppressive and dictatorial consequences, the Kennedy book is sidelined and ignored..., move along..., nothing to see here....

Mr. Kennedy’s work aside, and based on available information, your humble servant does not trust what is being peddled by Fauci and the Goofball regarding the “safety” and “efficacy” of the current mRNA-based “experimental fluids” now being touted as the exclusive way of combating the Wuhan C-19 virus.

Moreover, the propaganda being disseminated by Fauci, the Goofball and their apparatchik operatives that therapeutics – including monoclonal antibodies, hydroxychloroquine and ivermectin – are not only useless but worse, dangerous, is nonsense: among many others, just ask [Joe Rogan](#).

This offering, however, seeks not to further bash the Goofball (aka “Brandon”) or Herr Fauci. With each shift in position and movement of the goal posts, those clowns are doing a superb job of immolating themselves devoid of outside assistance. Instead, the objective here is to present an option which may (or may not) produce a partial answer to the current dispute between those who are unwilling to submit to mandatory shots of mRNA-based fluids and autocrats like Fauci and the Goof at 1600 who insist on that protocol.

Again, your humble servant is not an “anti-vaxxer,” but instead is anti-mandatory mRNA-based fluid injections and, for that matter, any governmentally-mandated inoculation regimen which would transgress the provisions of the Nuremberg Code of 1947, the Belmont Report or the protocols of the Common Rule discussed [here](#).

Instead, the suggestion is that a non-mRNA-based true “vaccine” currently awaiting “emergency use authorization” (“EUA”) somewhere in the bowels of the Food and Drug Administration (“FDA”) be expeditiously approved. Specifically, as a part of Operation Warp Speed, a pharmaceutical company based in Gaithersburg, Maryland, Novavax, Inc., has produced a non-mRNA-based true vaccine, NVX-CoV2373, for ease of reference hereafter, just “NVX.”

From the company’s [website](#), we learn that NVX was created using Novavax’ “recombinant nanoparticle technology to generate antigen derived from the coronavirus spike (S) protein and is formulated with Novavax’ patented saponin-based Matrix-M™ adjuvant to enhance the immune response and stimulate high levels of neutralizing

antibodies...” and that “NVX-CoV2373 contains purified protein antigen and can neither replicate, nor can it cause COVID-19.”

Your humble servant is not a virologist or biological engineer, so any attempt to here explain cogently what those terms and elements are would be, to state the matter politely, improper. On the other hand, because many physicians and scientists who do understand those terms – including Dr. Peter McCullough – have spoken favorably about the potential benefits of NVX as opposed to the fluids now being advocated by the Goof and Fauci, discussed [here](#), the “NVX” option cannot be disregarded.

In light of the fact that the *inventor* of the mRNA process, [Dr. Robert Malone](#), takes the position that the mRNA “vaccines” now being touted by Herr Fauci and the Goof present unacceptable health risks to human recipients and should be removed from use, perhaps it is time to consider other options. Dr. Malone, of course, is now [excoriated](#) as being a disbeliever in the gospel according to Saint Fauci and should be ignored. Thanks..., but no, thanks.

One of those options, of course, would be the NVX vaccine, which is not an experimental fluid, but instead is a true “vaccine.” As discussed [here](#), the FDA seemingly “cut corners” and “fast-tracked” the approval of the *license* for the Pfizer fluid, not to be confused with formal final approval of the fluid itself. Indeed, the FDA Pfizer license approval [letter](#) concedes that clinical trials and reporting requirements will need to continue, in some instances, until May, 2027.

The FDA approval letter also requires Pfizer to continue clinical trials and tests because existing protocols were not “sufficient to assess *known serious risks of myocarditis and pericarditis* and identify an *unexpected serious risk of subclinical myocarditis*. Furthermore, the pharmacovigilance system that FDA is required to maintain under section 505(k)(3) of the FDCA is not sufficient to assess these serious risks.” (Emphasis added)

Nonetheless, Herr Fauci and the Goof insist that getting the jab with the mRNA-based fluids is the only effective way to fight the virus.

Memo to the Goofball and Herr Fauci: if, as you claim, vaccination is the exclusive freeway to conquering the virus here, why not begin tooting the horn (and gently prodding the FDA) for the NVX option? What do you have to lose?

With so many physicians and Americans doubting – not without reason – the safety and efficacy of the existing fluids, why not give them the option of making available – **but not mandating** – a true vaccine, even if conditioned on EUA approval and use? Novavax, Inc. submitted its final data package to the FDA for EUA approval on [Dec. 31, 2021](#), where the application still rests.

It took the FDA a mere 108 days after the Pfizer submission for licensing of its “Comirnaty” fluid to be given the “green light” to proceed with distribution. Given that

track record, there would seem to be no good reason or excuse for the FDA to “slow-walk” EUA review and approval for NVX..., other than, of course, improper reasons or excuses motivated by desires to protect the financial interests of persons or corporations who and/or which might not welcome a non-mRNA-based competitor.

Really? Could such a mendacious and devious scheme actually exist?

Go read the Kennedy book.

I'll wait for your answer.
