Testing Company Used: FamilyTreeDNA

HVR1 MtDNA Results: 16172C, 16183C, 16189C, 16219G, 16239T, 16278T

MtDNA Haplogroup per HVR1 Results: U6a1

HVR2 MtDNA Test Results: 73G, 263G, 309.1C, 315.1C

Date MtDNA Test Was Ordered: Nov. 2004

Comments: Yes, finding myself in haplogroup U6a1 is a huge surprise. All of my known ancestors are from Scotland, Wales, Ireland, England and a few from Germany. My yDNA haplogroup is R1b. I know only the name and possible birth place of my earliest known female ancestor. Her name was Mariah Williams, b. 1835 in Alabama, according to one census - or Kentucky or Tennessee according to statements of some of her children. She married Hosea White in 1851 in Johnson Co. Illinois. She died prior to 1892 - no death date on the headstone - and is buried in Johnson Co. Illinois. She and Hosea White lived in Massac and Johnson Counties, Illinois. Of their children they had 4 daughters: Nancy, Sarah Albertine, Martha S. and Mary Isobel. Sarah and Mary married Dunn brothers and their descendants are known. Sarah had 6 daughters and Mary had 2 daughters. I was told by FTDNA that U6a1 is an old and rare haplogroup, originating in the Near East maybe 50,000 years ago. Apparently, most people belonging to that haplogroup are causasion Berbers living in north western Africa and the Canary Islands - and maybe Portugal. I have searched the web and did manage to find connections of this group to the Basque population. Also a very interesting article said that the U6 population might have arrived in Britain prior to the Celts as there are some language links between the Berbers, Basque and Celts. Still, there is very little information about U6a1. At Mitosearch I did not match anyone. Since no one can tell me much I am going to write my own story about a woman thousands of years ago who travelled from Northern Africa to Iberia and then to Ireland before any other race was there.

MtDNA Haplogroup per HVR1 Results: unknown

HVR2 MtDNA Test Results:

Date MtDNA Test Was Ordered: November 2004

Comments: Caroline Johnson (?) is the oldest known ancestor on my mother's side.

She is the mother of Carrie Crawford Smith who was my great grandmother.

Carrie was a graduate of Fisk University of Nashville Tenn. in 1897. She was sent to Fisk by Caroline and her husband, I believe his name was John. They were

probably about 10 years old when slavery ended. They may have been part of the

Crawford family. Carrie married Edward Alexander Smith. Her daughter, Edna

married a man of mixed ancestry. My mother remembers him as a light skinned

man of African descent. Edna was my grandmother. No haplogroup has been

assigned to my DNA results.

HVR1 MtDNA Results: 16223T, 16519C
MtDNA Haplogroup per HVR1 Results: HVR1 was not enough to determine haplogroup; when HVR2 was included, haplotype was determined to be W

HVR2 MtDNA Test Results: 73G, 143A, 189G, 192C, 194T, 195C, 204C, 207A, 263G, 315.1C

Date MtDNA Test Was Ordered: June 2003

Comments: Clara Shaffer dob 1877 was born in Philadelphia, Pa. I was told her family was Scot Irish and her maiden name was McCoach. Census records show her parents came from Ireland. However, her husband's death certificate lists her maiden name as Hutton (German). I have ordered her death certificate and hope to clear up the issue. If McCoach is correct, her mother was Martha McCoach. I was very surprised with "W" haplotype. I was originally designated "I" but much discussion on the internet resulted in FamilyTree changing it to "W".

MtDNA Haplogroup per HVR1 Results: H

HVR2 MtDNA Test Results: 173C, 263G, 309.1C, 315.1C

Date MtDNA Test Was Ordered: September 2004

Comments: My great-grandmother was Mary Etta Harper Hoke from Martinburg, Berkeley County, West Virginia. Mary Etta's mother was Mary A. Piper Harper from Jefferson County (West) Virginia. Mary's mother and my earliest known maternal ancestor was Susan NEER born about 1800 and married in Jefferson County to George Piper in 1825. The Neer family were of German origin but some of the early generations (1700s) had married into the Potts family who were English Quakers. I was not suprised to be Group H. The HVR2 mutation of 173C is very rare, I believe.

Comments: The oldest known direct female ancestor of my mother's was Elizabeth (Betsy) Burke. She was born in VA about 1790 and moved with her family to Cocke Co. Tennessee about 1800. There is a possibility that several other families made that move with the Burkes. They could have been the Pharris, Fraser/Frasure and Mantoith/Monteith/Menteith families. The Fraser/Frasures and Mantoith/Monteith/Menteith families were supposed to have had a large percentage of American Indian blood that was acquired in VA. My Y-DNA Haplogroup is E3a P1+. My male ancestor migrated from Lothringen (Lorraine, FR) where he was born in 1820 to Cincinnati, Ohio in 1849. This family had absolutely no knowledge of their African heritage, nor was there ever any indication in their background of it existing. My DNAprint test showed 93% Indo-European, 7% East Asian, 0% Native American and 0% African. I'll let you figure that out, I can't.

Comments: My earliest known ancestor is Martha Strode, born in France, daughter of an Englishman who fled England to Holland in 1692, later returning to France before immigrating to America. She was listed as an orphan on her arrival in Pennsylvania in 1696-97. She married Morgan Bryan, ca 1719 and they were the parents of Rebecca Bryan who married Daniel Boone. Martha Strode was the 25th generation of Strodes who date back to Warin the "Angle-Breton Arbaletrier" who

was a crossbowman in the army of William the Conqueror in 1066. Feel my Haplogroup H is right placement for my early ancestor Martha Strode.

Comments: Maternal grandmothers: My Y-DNA haplogroup was found to be R1b, so both my direct paternal and direct maternal DNA link me to the most common European haplogroups for each. I subscribe to Rootsweb's GENEALOGY-DNA mailing list, and have read Bryan Sykes' book "The Seven Daughters of Eve", but I'm still a relative novice regarding the the various aspects of DNA and its implications for genealogy. I would welcome any further suggested reading to enhance my understanding of this interesting field.

Comments: I never knew my mother (Anderson) but pictures of her show her to be dark and petite. Her mother was said to be dark and said to speak another language besides English. She may have used the name Williams and was educated although she was apparently born in early Wyoming. (Pre 1900.) On the paternal side of of the women of my family all is in order and confirms German, Prussian. Irish and English. I should also have a good bit of Swedish, but so far that hasn't shown up. I would be especially keen to better understand these mutations that to me seem to indicate Native American possibly from the Rocky Mountain or Great Basin areas. I can provide an extensive genealogy for the European ancestors that goes back to the earliest settlement of America.

Comments: mother maiden name-Ashmore born in Glenmora Louisiana maternal grandmother's maiden name-Thompson born in West Central Louisiana maternal great-grandmother's name-????? born in West Central Louisiana or Eastern Texas of the Caddo Indian Tribe. Additional notes regarding family background. Both my maternal grandmother and grandfather's families imigrated from England, Scotland, and Ireland in the late 1700's. The family has lived in North Carolina, South Carolina, before moving to Eastern Texas and West Central Louisiana. There is a very strong family background of Caddo Indian on my great grandmother's family. She attended Caddo annual gatherings around the East Texas, Nagidoches area as a child. My mother's father last name isAshmore and his mother's name was Mary Self. Spencer Ashmore's family moved to East Texas from Greenville County South Carolina sometime betweeb in the 1840-1860's. He was a buggy maker. I have several male members from the 1700's named Spencer, James, William, and Lemual. I have been able to trace my grandfather's family back through his mother's family to Dorset County in England into the early 1600's.

MtDNA Haplogroup per HVR1 Results: B

HVR2 MtDNA Test Results:

Date MtDNA Test Was Ordered: 11 August 2004

Comments: My DNAPrint BioGeographical Ancestry Test revealed East Asian ancestry, which I expected based upon suspected Native American ancestry. Further evaluation of the data revealed sequences related to the peoples of the SW United States. As a result, I was not surprised upon discovering that I belong to Haplogroup B. I have only just begun tracing my maternal ancestry. So far, I am at Mattie, born in the late 1860s, early 1870s in Alabama. She married a man by the name of Jack Williams (also from Alabama) and moved to Louisiana where their children and subsequent generations were born.

HVR2 MtDNA Test Results:

Date MtDNA Test Was Ordered: 16 March 2004

Comments: My great great grandmother was Katherine McCarty, and the McCarty's came from Scotland and Ireland. There is an interesting study completed by the University of Padua, in Italy, which studied the mtDNA of the Apostle Luke extracted from 2 teeth provided them from Luke's lead coffin in an ancient Basilica. The test was conducted to put to rest an old theory that the Holy relic was replaced centuries ago by a dead Greek soldier. Many articles are found online, one entitled, "Genetic Characteristics of Evangelist Luke . . ." His mtDNA is exactly the same Haplogroup and sequence as my own: H 16235 16291. Luke's mother was a 'pagan slave.'

Date MtDNA Test Was Ordered: 27 May 2004

Comments: The list of things that I don't know about her is much longer longer

than the list of things that I do know. Her first name is Jemima/Gemima. She was married to Nimrod Shepherd and is listed in the Whitley County, KY Census for 1850-1870. She is supposed to have died in 1876. According to the Census, she was born in NC anywhere from 1782-1788. I have always been told that her maiden name was Smith. More recently, some research indicated that she was the sister of Elizabeth Smith (who married Uriah Shepherd, a likely brother of Nimrod Shepherd) and a daughter of James Smith and Nancy Mulkey. Nancy Mulkey was supposed to be of Cherokee descent. This mtDNA test appears to rule out that theory. Either Jemima was not the daughter of Nancy Mulkey or Nancy Mulkey was not of Cherokee descent on her mother's side.

Date MtDNA Test Was Ordered: 16 August 2003

Comments: My earliest known direct line maternal ancestor is Anna Maria Barbara Koger, who according to my records was born about 1701 in Augen, Baden-Durlach, Germany. She was the first wife of a person who is listed as Adam Miller in my file, but was most likely Johann Adam Mueller back then. Anna Maria Barbara (Koger) Miller died in 1794 in Rockingham County, Virginia. Adam and his wife were the first permanent white settlers in the Shenandoah Valley. They passed through Pennsylvania on their way to Virginia. I am descended from their daughter Anna Barbara Miller who married Jacob Baer. According to the certificate, I am in Haplogroup H which is very prevalent in Europe, which fits with my knowledge of my ancestry. According to what I have heard elsewhere, my mutation at 16318T puts me into Haplogroup U7 (though ftDNA didn't indicate this in my results). Haplogroup U7 is found in the more easterly portion of Eurasia, like India, Iran, Iraq, and other parts of Asia, which yes, I do indeed find to be quite surprising as I have no known links to that part of the world. Perhaps this means that collectively my ancestors were not only some of the earliest immigrants to America (connections to both Jamestown and the Mayflower), but also some of the earliest immigrants to Europe from Asia, but this is just a guess... I really haven't looked into my other mutations very much, so I don't know what surprises they may hold for me.

Comments: In addition to the MtDNA, I had ethnicity testing, which showed 92% European and 8% Native American. While I have always suspected some small ethnic variation in my mother's family, the reality is a surprise. This is an old Mormon family, most of them arriving in the early 1850's. We have an extensive genealogy with not a hint of Native American anywhere. The most likely candidate would be my great-great grandparents, I guess. My g-g grandmother was Margaret Ross, born in Scotland in 1840, married to Royal James Cutler, born in New York in 1828 and of English descent. However, since my MtDNA is This is all so fascinating!

Comments: My earliest matrilineal ancestor is my 9th g.grandmother Marguerite Lorie b 1668 in Mobile, ALA. She married a Frenchman and I wondered if she were French as well (or Indian, Black, etc.) Her descendents moved to Montreal, Can; Kaskaskia, Ill; & St. Genevieve, MO--all French colonies. Eventually, her 3rd great granddaughter Marie Therese Marcelite Misse (my 4th g. grandmother) married an American of English extraction, Thomas Hopkins, and they moved to the Ozarks (Douglas and Howell Co., MO and Sharp Co., AR) where my ancestors have lived since then. I have learned that Marguerite was a European, not an Indian or an African.

Comments: My oldest maternal ancestor was a woman named Sally Wright, born in Monogalia County, West Virginia, in 1798 and who died in 1855 in Upshur County, West Virginia. Other surnames which appear in my maternal line are Hinkle, Chipps, Wenger, Cecil, Dean, and Musgrave, and they were born in West Virginia, Michigan, Nebraska, and California. (I am from Hawai`i.) The surprise that my mtDNA type gave me was that this is an unusual type for Europeans, such as my ancestors. It is apparently more common in Western Asia than in Europe. This was not something I expected to find in my own family tree--although there have been weirder results reported.

Comments: My 2nd great grandmother is my oldest known direct line maternal ancestor. Her name was Martha S Brooks; she was born in Mississippi Oct 1841 and died in Navarro Co., Texas in 1888. Her daughter Mary Cope, my 1st great grandmother was born in Ark about 1864 and died in Navarro Co., Texas in 1888 of Typhoid. My grandmother Luella D Walker was born in 1884 in Navarro Co., Texas, she died in 1982 in Louisiana. We have no proof but believed the family was Northern European and mainly Celtic in origin. There were a couple of surprises in the results of the test, not that I have complete understanding, in that I expected some NA results. There is no genealogical proof for that expectation only that my mother and several of her siblings looked like they had Indian ancestry and the family was always told they were a 1/8th Indian, but perhaps that will be on the paternal side. The other surprise was the Ashkenazi matches, several in the low resolution matches and 1 in the high resolution matches. Hopefully someone can explain those to me. My son also had the Y DNA Print and the results came back

with an estimate of 100 % European.

Comments: Earliest proven maternal ancestor is my great-grandmother, Sarah Frances (Pierce) Sisk, born 1881, in Alabama, probably in Jackson County; father James Pierce, born Alabama; mother's maiden name was Tipton, also born Alabama. Family legend has it that she was part Indian, perhaps Cherokee or Choctaw. A tri-racial background is also a possibility. A picture of her and her husband is available at: http://www.daver.info/pix/album1/sisk_cs.htm I was expecting a haplotype that would have supported a non-Caucasian heritage, so ending up with J1b1 (plus 16392T) that is most common in Iceland, and is likely indicative of a deep ancestry in Great Britain was a bit surprising.

Comments: I know only to my great-great grandmother. Her name was Anna

Dupont, My great grandmother's name was Francelina Dupont Cataille, later she married and became Soares, from the Azores Portugal. Immigrated here in 1901. To Mass. Was given pictures by my grandmother who said these were relatives, in some mountainous country. (not Azores) and really that's all I know. I would really like to find out a little about my family and myself. OA said I was from the Ulla Clan.

Comments: FTDNA and the people who log onto Genealogy-DNA-list have been unable to even suggest what mtdna haplogroup this person is in. The ethnic origin of the maternal line is English or possibly German. The paternal Y-DNA indicates a probable I1b, based on matches in the FTDNA greater database, which is consistent with a paternal line that goes back to southeastern England in the late 16th-early 17th centuries. Ancestors emigrated to the Boston area in the 1640s. The Ydna was not a surprise. The mtdna was. We expected H or some other basic western European haplogroup.

Comments: My mother's grandmother was named "Gunhild Hvalen, (Andersdatter)" as best known at this point. She was from Telemark, Norway and emigrated to Dodge County, Minnesota in the early 1860s > Day County, South Dakota to live with relatives in the later 1880s following her husbands death in 1887. I had the mtDNA test done in order to preserve my mother's mtDNA as she had no sisters nor any female children. These results appear to be in line with our family history as known and as remembered through family lore.

Comments: The oldest known direct line Maternal ancestor was my great great grandmother Juliana Ellison Farrow from Hyde County, North Carolina (born Feb. 4, 1840-died May 30, 1907. I know her mother's name (Eleanor Smaw) but I don't know her birth or death dates. I believe the family was from the British Isles. I wish somebody would explain the meaning of my genetic mutations? Does it specify a specific geographic location where the change took place. FamilytreeDNA is great about explaining surname studies, but Oxford Ancestry is better at explaining mitochondria DNA, but you have to take their tests before they'll explain a lot to you. I could not find anyone in their free message board that had the same mutations. All I'm sure of is that I'm a member of the Helen clan, and I had to learn that from Oxford Ancestry. FamilytreeDNA just gives you a generic migration chart and a general explanation of mtDNA. So, does anyone know and will anyone out there explain the meaning of my genetic mutations? Did we all start out as L's and turn into other haplogroups as we migrated. Help!

Comments: My g-grandmother was a Mantak who immigrated to Pittsburgh in 1881. Many other Mantaks also came to Pgh, but many more went to Cleveland. The Mantaks are a small ethnic groups that only in recent generations had begun to call itself "German." They live in far eastern Slovakia, in the town of Metzenseifen (Medzev in Slovak). There is Niedermetzenseifen (Nizny Medzev) down in the valley and a village up on the hill called Obermetzenseifen (Visny Medzev). In the past two centuries, these two locals have vacillated between being two municipalities and one municipality. Metzenseifen was founded by the Mantaks in the 1300's. Before that, they were somewhere within a hundred mile radius of the French town of Metz. They could have been right in Metz, in the Alsace region surrounding it, or in the nearby Pfalz (Palantine - includes cities of Saarbrucken and Trier and Kaiserslautern) regions of Germany, or in Belgium or Luxembourg or the Netherlands. The Nantaks founders were a small group of people, but they and their descendents have been marrying only among themselves from the 1300's till the

1900's. So, it is presumed that all Mantaks are related. The current President of Slovakia, Rudolf Schuster, is a Mantak. The Mantaks on the average are entrepreneurial and place high value on education (compared both to their Slovak neighbors and Germans in Germany). At one time, Cleveland's largest employer was a Mantak. My maternal line goes like this: Cecelia Anne Clancy (me) b 1956 in Pittsburgh Pennsylvania USA; Ruth Irene King b 1928 in Pittsburgh; Rose Barbara Mueller/Miller b 1894 in Pittsburgh d circa 1986 in Pittsburgh; Maria Meder b Feb 2nd or 4th 1860 in Obermetzenseifen and died circa 1936 in Pittsburgh, Anna Maria Schuster b circa 1829 in Metzenseifen probably Ober- and married to Franciscus Meder on Oct 21, 1847) b circa 1829 and probably died in Metzenseifen; Elisabeth Meder. Franciscus Meder's parents were Bartholomew Meder and Maria Schmotzer both of Metzenseifen. Anna Maria Schuster's parents were Caspar Schuster and Elizabeth Meder.

Date MtDNA Test Was Ordered: Nov 2003

Comments: ggrandmother from Stettin,Pommerania,Prussia born mid 1800s. Stettin lies at the intersection of the Oder River and the Baltic Sea. About a millenium ago, it was near the homeport of the Jomsvikings. My maternal ggrandfather served in the Prussian army. The brothers of my ggrandmother allegedly served in the Kaiser's honor guard due to their height. The area has shifted from time to time from Swedish, to Polish, to Prussian and now Polish control.

Date MtDNA Test Was Ordered: 1/2003

Comments: This is an update to my entry from 2003. Originally tested by OA, and had no mutations (CRS). New testing by FTDNA reveals one mutation at 16519C (which OA doesn't test for). My mtDNA line traces back to Maria Margretta POTTER (aka Margaret POTTER) b. 1752 of Franklin Co., PA (Cumberland Valley). Her parents are supposed to have come from Ireland, but I don't yet have a confirmed name for her mother. Margaret married Ludwig "Louis" HUYETT in 1771 and they lived in Washington Co., MD. Many of their children went to Huntingdon Co., PA.

Comments: My grandmother claimed to be Polish, although in addition to Polish her German was perfect; she also learned English quickly. Her surname was something like Skurtowicz. She came to the U.S. around 1910 - 1915. According to the results, I was surprised to find majority of the "hits" all over Frisia, Germany, Saxony, Norway, and more. It seems I am more Germanic than Slavic, a lot more. I am a historian by education and have been searching for my roots for decades, with little to no success. I'm not certain what the dna results mean (I'm new to this), I need to give myself a dna education, but I'm quite surprised. I'm very pleased I had this done, and now that I have a lot of answers, I also have more questions than ever!

Date MtDNA Test Was Ordered: November 2003

Comments: The oldest known ancestor in my maternal line for whom I have a name is my gg grandmother Martha Henson, b. 26 Apr 1806 in old Livingston County, Kentucky. Interestingly, I know where Martha's mother lived, the name of her husband, when she died, the names her other children, and what her mtDNA had to have been, but I do not know her name. Other names in my maternal line are Hall, Nelson, and Yates. European ancestry is no surprise. Haplogroup K restricts things a bit it would seem, and 16320T refines it even more. I am still looking into this. My Y-DNA haplogroup is R1b. Also no surprise, but DYS 426 = 13.

Comments: earliest maternal line known so far is Catherine Hamilton,b@1790 in Greenock area of Scotland, followed by Agnes Young,b1825 in Greenock, Catherine Broadfoot Love, b1867 also Greenock, Catherine Love Suttie, b 1901 in Cambuslang, Lanarkshire Scotland, Catherine Love Suttie Smith, b 1920 in Rutherglen, Lanarkshire, myself Catherine Murray b 1940 also in Rutherglen. My father's known paternal line is equally prosaic, six generations of William Murray, to @1803, all born in either Old Monklands, Lanarkshire or in Rutherglen. My father only had daughters and I only have sons so we have broken our respective chains in one sense. Most of the other branches in our family, hail from Midlothian, Scotland, Antrim and 'King's County' in Northern Ireland, Staffordshire & Worcestershire, England and Rathkeale, Limerick in Eire. Family tradition is that we have Spanish or Italian forebears but no sign so far! I thought we would be Tara because of this so maybe my grandmother was right. I certainly feel more at home in the western reaches of Scotland than anywhere else I have travelled or lived. from

the description of the probable Etruscan environment of Tara, 17K years ago it sounds just like western Scotland & Ireland are now. Other names in our tree are Barrowman, Whitson, Breckenridge, Mathieson, Killen, McBride, Stewart, Layton, Bullock, Marshall, Paterson, Craig, Green, Duncan, Shields, Davidson and Flighty - all fairly British in origin but I am still looking!

Date MtDNA Test Was Ordered: august 2003

Comments: I know my gg grandmother, Emma C. Willey who married Benjamin F. Witham in 1872 in New Hampshire. As far as I know, this branch of my family is very English and came from England. Being CRS in HVR1 and only one mutation in HVR2 backs this up considerably, IMHO. Whether there is any celtic from here, I don't know but it seems to be a slim to none chance. I'm researching this branch now, and shall update when I receive any further info.

MtDNA Haplogroup per HVR1 Results: U5b1

HVR2 MtDNA Test Results: 73G, 150T, 207A, 263G, 315.1C

Date MtDNA Test Was Ordered: SEP. 2003

Comments: My U5b1 mt haplotype is said by FTDNA to have originated among the Saami ("Lapps") of northern Scandinavia. The earliest known ancestor in my mother's unbroken female-to-female line was a woman who lived in the vicinity of Baltimore MD in the 18th century. My working hypothesis -- subject to rejection if contradictory data should appear -- is that our "maternal line" immigrant ancestor was among the Swedish or Finnish settlers of 17th century Delaware (about 60 miles from Baltimore).

Testing Company Used: FamilyTreeDNA

HVR1 MtDNA Results: 16093C, 16129A, 16519C

MtDNA Haplogroup per HVR1 Results: H

HVR2 MtDNA Test Results: 263G, 309.1C, 315.1C

Date MtDNA Test Was Ordered: Nov. 2003

Comments: This line can be traced back to Anastasia Wormsbecker b. abt. 1858 who was more than likely a German from Russia. I am surprised that there are no matches for this result at Family Tree DNA database.

Testing Company Used: FamilyTreeDNA

HVR1 MtDNA Results: HVR1 16069T,16126C,16186T,16159C

MtDNA Haplogroup per HVR1 Results: J

HVR2 MtDNA Test Results:

Date MtDNA Test Was Ordered: SEPT 2003

Comments: We didn't really know what to expect since there have been adoptions in our family. It wasn't what we expected. We had expected to fall into a more common European haplogroup perhaps nordic.
